with in-line engine is stated in all reports. The fact that this fighter was allegedly fitted with a nose wheel was mentioned for the first time in this report and thus requires confirmation. This type was possibly a King Cobra F-63 in use at that time for training purposes. On the basis of available information a fighter regiment or fighter pilot school is assumed to be stationed at this airfield. From a report of October 1947 it was believed that a parachute training center was also located in Yerevan.
